laboratory notes

date : 2018 - 03 - 08

name :
zackary a. miller
student id :
1851053
course :
c.i.s. 119
lab name :
hands on
project 5-1

time	actions executed
2018-03-11 18:59	Word was started and the string "a test this it is, be alarmed by poor grammar do not" was entered into a word document.
2018-03-11 18:01	The word document was saved as "A test this is.doc".
2018-03-11 19:03	Excel was started and the numbers "42", "1337", and "1.79769313486232E+308"
2018-03-11 19:07	The excel document was saved as "there are many excel spreadsheets like it, but this one is mine.xls"
2018-03-11 19:10	I closed both word and excel and started winHex as administrator.
2018-03-11 19:13	I looked at the files in winHex and confirmed that reading binaries, even if displayed in hexadecimal, is a fool's errand.
2018-03-11 19:18	I opened notepad and pasted the numbers from the headers of the two files in the notepad document I had opened
2018-03-11 19:20	I edited the files in the hex editor for fun, corrupting the documents.
2018-03-11 19:25	I saved the notepad as c5Prj01.
